OTC Markets Group

Welcome to the OTCQB Venture Market Podcast. Joining us today is Darcy Vis, VP of Exploration and Director of GoldInxs Mining Corp., which trades on the OTCQB Venture Market under the symbol INXGF. GoldInxs is a Canadian mineral exploration company focused on advancing high-potential gold exploration projects in British Columbia. Welcome, Darcy. Thank you so much for joining us today.

Darcy Vis

Thanks, Cecilia. It's a pleasure to be here.

OTC Markets Group

To start, give us an overview of GoldInxs and your exploration focus in British Columbia.

Darcy Vis

Yeah, for sure. GoldInxs is a junior mining company based in British Columbia, Canada. We have one project, the Fishpot Project, which is our flagship in central BC, just west of Quesnel. It's road accessible, with good haul roads, and it's fairly close to infrastructure. It's quite early stage at this point, but we've been working hard to move it beyond early stage into a more advanced project. We've done a lot of field work this past year, and we're aiming for our inaugural drill program this fall.

OTC Markets Group

Was there anything else you want to add about the Fishpot Project? What initially attracted you to it, and what else makes it a great opportunity down the road?

Darcy Vis

Yeah, for sure. The project was originally staked by our executive chairman, Barry Miller. Back in 2020, his geologist thought it was an interesting target, so they staked it. I went up to the project in November 2024 and spent a couple of days looking at rocks. The surface alteration was really compelling for an epithermal-style deposit. Alteration is always what I

look for. It's basically how the rock changes in relation to potentially mineralizing fluids, and there is some interesting veining. That's what got me interested. We formed GoldInxs as a private company, did a bit of work, and then took it public through an IPO that closed in July. It's also a regional story. We're about 65 kilometers southeast of the Blackwater Mine, which is currently going through an expansion to become one of the largest gold producers in Canada. It's a really good region to explore in, and this project had all the right ingredients. All the geochemistry and geophysics we've recently completed looks really good for this stage. The drill will do the talking, so we'll see if these theories hold up, but I'm really excited to see where this one goes.

OTC Markets Group

Talk more about your geological models and techniques. How do they make you unique, and how do they impact your surveys, targeting, and exploration tools?

Darcy Vis

I'm a geologist and I've been doing geology for about 17 years. I also run my own consulting company, so we've taken the best of what I've learned over my career and applied it to this project. I always start with the rocks themselves. Being a technical person, the rocks were talking to me, and they all looked like the right style. Then we went in with trace geochemistry, trying to connect it to certain models. We did a lot of rock geochemistry on the project. On surface, we got gold grades up to 5.65 grams per ton, silver values over 11 grams per ton, and copper at 0.42 percent. Those are really good numbers. From there, we built on that to figure out what's going on in the subsurface, and that's where the geophysics came in. We recently completed an induced polarization survey, which shows a circular chargeability high surrounding a magnetic high found by the magnetic survey we did earlier this year. To me, that points to a potential heat source. We're now targeting that area as a copper porphyry target, with the surrounding epithermal system. So, we're not just gold in excess. Hopefully we'll be copper in excess as well. We also recently completed a virtual drill survey, a cutting-edge technique that uses satellites to determine potential elements in the subsurface. With our drill program, we'll be targeting some of those areas to see how effective the method was, whether it's repeatable, and whether we can apply it to other areas of the property.

British Columbia remains one of the premier mining jurisdictions in the world. What competitive advantage do you have in exploration and development?

Darcy Vis

I've worked here, I grew up here, and I was born here. It's nice to operate in your own backyard. You know who the people are and how everything operates. We have a highly skilled workforce in the province, and a significant number of mining companies are based here. We also have a strong financing system. It's a stable jurisdiction, so if we find something, we know we'll be able to progress it and develop it, and the capability to do that exists here. The provincial government is quite supportive of critical minerals and development. We're currently heading into an election, so we'll see how that goes, but BC is a resource-rich province, and that makes everything a lot easier on the operations side.

OTC Markets Group

GoldInxs trades on the OTCQB Venture Market here in the U.S. and is also traded on the TSX-V in Canada. How does this cross-trading on the OTCQB enhance your investor strategy?

Darcy Vis

Reducing barriers for investors from other jurisdictions is critical. We're more than happy to welcome our American friends to become shareholders, and the OTC definitely helps us achieve that. We're excited to have everybody come along and be part of this story.

OTC Markets Group

Looking ahead, what milestones should investors watch over the next six to 12 months?

Darcy Vis

We recently released our IP and geophysics results last week. On Monday this week, we announced a capital raise with flow-through and hard-dollar financing. Those funds will go toward our drill program, which is coming up this fall. The key milestone is when the drill

starts turning. After that, we'll see what core comes out of the ground, and assay results will likely follow early in the new year. Then we'll refocus and replan for expansion. It's a great time to get involved. We're pre-discovery, but we have high hopes, and it's an exciting time to be part of the company.

OTC Markets Group
Darcy, it's been a pleasure speaking with you, and we can't wait for the updates next year.

Darcy Vis
Thanks, Cecilia. It was a pleasure. Thanks, everybody, for listening.
